Accessing other resemblance measures

PRIMER 7 allows the user choice of 44 other resemblances, firstly divided into two (mutually exclusive) types: Similarities (including L&L's S numbers) or Dissimilarities/Distances (including L&L's D numbers); then most of the same coefficients split instead into Quantitative or Presence/Absence measures; and finally two specialised groups of Correlation coefficients and Taxonomic-based P/A measures (the latter using an aggregation file of the type met in Section 2, on species relatedness). These are all accessed through the Measure•Other button and the drop-down list.
