Stats to worksheet

Several of the routines in PRIMER 7 also incorporate a *check box* for sending summary statistics used in that routine to a further worksheet. Here, this results in a second sheet (probably named Data4), which is just a single column of totals across prey species for each of the gut samples. This is the same data as previously obtained with **Analyse>Summary Stats**>(For•Samples) & (✓Sum), in Section 3. (There is often more than one way of obtaining the same information in PRIMER!). Another example of summary statistics being sent to a separate worksheet is for the Normalise pre-treatment option – see below – for which the mean and standard deviation of each variable, used in the normalisation process, can be sent to a separate sheet. If this option is not selected, the same information is usually sent to a text-format results window, which can be viewed from the Explorer tree but cannot be further manipulated (unless then saved as an external .txt or .rtf file and edited in a text editor – or directly copied and pasted into Excel column(s) – to re-input as a new sheet).
