1.3 Pros and Cons of using PRIMER

To re-cap and summarise, below is a table outlining the primary pros and cons of using PRIMER, as I see it:

Pros	Cons
$\bullet$ Easy to use	$\bullet$ Not free
$\bullet$ High-quality results you can trust	$\bullet$ Not platform-independent (Windows only)
$\bullet$ Special focus: robust multivariate methods, especially for ecology	$\bullet$ Niche is somewhat narrow
$\bullet$ Built by a small team of experts	$\bullet$ Not much univariate or classical stats
$\bullet$ Does not require programming skills or code-writing	$\bullet$ No scripting (yet)
$\bullet$ Does many things that no other software will do	
$\bullet$ Handles complex experimental/sampling designs correctly	
$\bullet$ Great for scientists/practitioners
